

Proposal: Rolls Royce

Draft

EXECUTIVE SUMMARY (PROPOSAL SECTION) — ROLLS■ROYCE

Client Context

“Rolls■Royce” refers to two distinct companies with different ownership, operating models, and contracting/procurement requirements:

- 1) Rolls■Royce Holdings plc — UK public company focused on power and propulsion systems across Civil Aerospace, Defence, and Power Systems, with significant aftermarket/service activity and a global footprint with major UK operations historically centered in England (notably Derby).
- 2) Rolls■Royce Motor Cars Ltd — a separate legal entity, wholly owned by BMW Group, producing ultra■luxury vehicles (e.g., Phantom, Ghost, Cullinan, Spectre) with global headquarters and sole manufacturing at Goodwood, West Sussex.

Engagement Objective

The primary objective of this engagement is to establish a clear, contract-ready definition of the “Rolls■Royce” entity in scope and align delivery to the correct business context:

- Industrial systems, aviation, defence, nuclear/energy, or aftermarket services typically indicate Rolls■Royce Holdings plc.
- Vehicle brand, retail/customer experience, or Goodwood manufacturing typically indicate Rolls■Royce Motor Cars.

Approach and Scope (High Level)

Phase 1 — Contracting Entity Confirmation and Alignment

- Confirm which Rolls■Royce entity is the contracting party (Holdings plc vs. Motor Cars).
- Align stakeholders and governance to the correct organization to avoid downstream confusion in approvals, compliance, and delivery expectations.

Phase 2 — Business Context Tailoring

- If Rolls■Royce Holdings plc is in scope: position work around Civil Aerospace, Defence, and/or Power Systems contexts, recognizing the importance of services/aftermarket and the need for operational execution discipline.
- If Rolls■Royce Motor Cars is in scope: position work around Goodwood-centric design/engineering/build operations and the realities of low-volume, high-customization luxury manufacturing.

Key Considerations and Risk Awareness

- Stakeholder and compliance divergence: The two entities have different ownership structures and procurement/compliance environments; confirming the contracting party first is essential to prevent misalignment.
- Operational execution risk (Holdings plc context): Prior reporting has referenced technical and cost challenges on certain widebody engine programs (e.g., Trent 1000 durability/wastage provisions), which can introduce near-term cost and execution pressures that should be reflected in planning and delivery assumptions.

Expected Outcome

By beginning with explicit entity confirmation and then tailoring scope to the appropriate operating context (industrial propulsion/services vs. luxury automotive manufacturing at Goodwood), this engagement will reduce ambiguity, accelerate alignment with the right stakeholders, and establish a foundation for effective delivery under the correct Rolls■Royce organization.
